SUMMARY

Highly motivated and creative Full Stack Developer with a web development certificate from Rice University. Over 20 years of experience in television production and broadcast directing utilizing a combination of communication, problem-solving, team building and technical skills in a fast paced television news environment. Proficient in a number of front-end and back-end technologies, on and off line video editing systems, and more. Prepared for a creative and hardworking team environment.

TECHNICAL SKILLS

Front-end: HTML5, CSS, Bootstrap, Javascript, JQuery, GraphQL, Tailwinds CSS
Back-end: MySQL, MongoDB, Express.js, React, Node, Handlebars, Webpack
Video Production: Adobe Premiere, Sony ELC, various video and audio switcher platforms

PROJECTS

Project: The Mash Up
Github: https://github.com/Phil-Pfister/The-Mash-Up
URL: https://the-mash-up-b8a52234a88b.herokuapp.com/
- A full stack MERN application using graphQL and MongoDB and React. Users can buy and sell music related products, search using keywords, and navigate the site with ease as they explore all the items for sale.
- Core Responsibilities: Coded functionality for GraphQL queries and mutations, set up models for database management, and coded the user profile page
- Tools: Javascript, GraphQL, MongoDB, Mongoose, React, Vite, Express.js, Tailwinds CSS

Project: Meal-Planner
Github: https://github.com/Phil-Pfister/HWP_Meal-Planner
URL: https://young-gorge-82099.herokuapp.com
- A full stack application using the RESTful API method. It uses the Edemam api to generate recipes which the user can save in their own personal "recipe box" and recall later. The saved recipes are stored in a database with the users and connected by a user id. Each recipe can show a list of ingredients and has a link to the original website for complete instructions
- Core Responsibilities: Coded functionality for API calls, search routes, controller routes and database models
- Tools: Javascript, Sequelize, mySQL, Handlebars, and MVC framework

Project: Weather Dashboard
Github: https://github.com/Phil-Pfister/Weather-Dashboard
URL: https://phil-pfister.github.io/Weather-Dashboard
- Weather forecast app that displays current weather conditions and three-day outlook using Open Weather API. Allows the user to search cities and saves searches locally for future queries
- Core Responsibilities: Coded from scratch, using API call to Open Weather Map
- Tools: Javascript, HTML, CSS, Bootstrap, Jquery

RELEVANT EXPERIENCE

Broadcast Director
2007 – 2022
TEGNA
KVUE Austin, TX, KHOU Houston, TX
Directed various live news broadcasts in a fast-paced control room environment. Led a team of production personnel to televise and broadcast daily newscasts. Recorded and edited short video spots for news and weather updates. Programmed video switcher effects and automation cues to run effects during live newscast. Communicated with on air talent and producers to respond to a rapidly changing live news atmosphere

EDUCATION
